

30X30
MESSAGING KIT
**FOR ZOOS, AQUARIUMS
AND SCIENCE MUSEUMS**

WHAT'S INCLUDED

- 2 Introduction
- 4 Talking points for general reference
- 7 Responses to hard questions / FAQ
- 9 Sample posts and related resources for social media
- 12 Sample script for in-person engagements

The following guidance and examples are intended to help zoos, aquariums and museums in their efforts to raise public awareness and gather public input for the new national goal of conserving at least 30% of America's lands, waters and ocean by 2030 in keeping with the vision of the America the Beautiful Initiative. These recommendations align with the national and international movement for 30x30, yet have been tailored to suit the strengths and circumstances of zoos, aquariums and museums in the United States.

This kit was developed by The Ocean Project in collaboration with Frost Science, National Aquarium, New England Aquarium, Philadelphia Zoo, San Diego Zoo Wildlife Alliance, Seattle Aquarium, as well as the Association of Zoos and Aquariums, Aquarium Conservation Partnership, and the National Ocean Protection Coalition.

Produced September 2021. Updated January 2023

THE 30x30 GOAL AND THE AMERICA THE BEAUTIFUL INITIATIVE

Many visitors to zoos, aquariums and science museums will not have heard of 30x30, let alone know that it was adopted as a national goal in January of 2021, and as a global goal in December of 2022. The plan for achieving 30x30 in the US is outlined in “Conserving and Restoring America the Beautiful” (May, 2021), while the approach to achieving 30x30 globally comes under the umbrella of the United Nations Convention on Biological Diversity.

Yet once aware of 30x30, most visitors are likely to support the goal, applaud the approach, and appreciate the information. Polling by Hart Research Associates has shown that 86 percent of voters in the United States support a national goal of 30x30. Additional research by The Ocean Project has found that zoo, aquarium and science museum audiences expect, trust and appreciate when provided with information and recommendations for advancing conservation. And data from IMPACTs Research has suggested that when zoos, aquariums and science museums engage visitors in their missions, these organizations also do better on the bottom line.

Moreover, many visitors to zoos, aquariums and science museums will welcome an opportunity to document their support and share their perspective. These additional steps, where zoos, aquariums and science museums are not only providing information but documenting interest and gathering input from their broad and diverse audiences, will be especially important to advancing progress in light of the emphasis on a collaborative, inclusive, and locally-driven approach to 30x30.

The focus in this guide is on raising awareness of the goal of 30x30, as well as the collaborative, inclusive and locally-driven approach as envisioned in “America the Beautiful.” These same points and examples also can be adapted to fit efforts that advance the conservation of local areas.

OPPORTUNITIES FOR ENGAGEMENT

The following kit covers key points and hard questions as well as sample scripts and suggested posts, all aimed at helping you develop the right messages for your audiences. A few additional tips on finding the right time for raising awareness and gathering feedback:

- **When engaging with audiences on-site, consider the moments when groups of visitors are waiting for a presentation or film to begin, or pausing as they leave an exhibit.** The New England Aquarium has had success speaking with visitors about 30x30 as they were waiting for a talk at the top of their central tank, while the Philadelphia Zoo has had great results connecting the message with what visitors had just experienced in their popular exhibit, “Big Time.” See sample scripts and tips below.
- **When engaging with audiences online, be creative!** Announcing your organization’s support for the 30x30 goal and America the Beautiful initiative is, of course, a great first step. You may also wish to become involved with a local proposal for a new or expanded protected area, or simply incorporate the 30x30 message into your everyday social media posts, such as when responding to a news story, commenting on an upcoming community event, or even announcing the birth of a new animal.
- **When asking for opinions, don’t be shy!** When engaging the public on-site, The New England Aquarium, the Philadelphia Zoo, and many others have found that visitors appreciate the opportunity to sign a comment card and share their thoughts on why conserving animals and protecting nature matter to them. More recently, five different organizations successfully piloted a promising new approach by asking visitors to share their opinions on video, and then creating compilations that could be shared with decision makers.

Last but not least, AZA members can receive ongoing updates about progress towards 30x30, nationally as well as internationally, by joining the 30x30 “Community” on the AZA Network. And at any point, please do not hesitate to reach out to project coordinators via 30x30@theoceanproject.org.

TALKING POINTS

Select and use as appropriate for your context and audience. For more on the case for 30x30, please see the American Nature Campaign, which is the source of many of the facts cited below.

1. We all depend on nature, and nature is in need

- Nature is a source of joy and wonder, with countless benefits for our communities, from providing us with food and recreation to supporting our economy and stabilizing our climate. **(CONSIDER INSERTING ADDITIONAL DETAIL AND/OR CITING A RELEVANT LOCAL EXAMPLE TO HELP SET HISTORICAL CONTEXT AND HELP ENABLE AN INCLUSIVE DISCUSSION)**
- But we are in the midst of a nature crisis. Here in the United States we are losing one football field's worth of our natural lands every 30 seconds, nearly every corner of our ocean has been touched by human impact, and at least one-third of our wildlife is now at increased risk of extinction. **(CONSIDER INSERTING ADDITIONAL DETAIL AND/OR CITING A RELEVANT LOCAL EXAMPLE TO HELP UNDERSCORE THE NEED AND TELL A MORE COMPLETE STORY)**
- This doesn't just spell trouble for wildlife - it spells trouble for all of us. Almost all of our economic activity relies on nature. The World Economic Forum's annual risk report has found that the top five risks facing the world are all linked to the environment. These include biodiversity loss, climate change, and extreme weather events.

2. It's up to us to conserve nature, together

- Scientists say that conserving at least 30% of our lands, waters and ocean by 2030 (30x30) is necessary to prevent the extinction of wildlife, stabilize our climate, and safeguard our future, and our children's future.
- **(YOUR AQUARIUM/ZOO/MUSEUM)** applauds the America the Beautiful Initiative, which has adopted this goal of 30x30 and provided a vision for achieving it through a collaborative, inclusive, and locally-driven approach.
- For more than a century, the United States has risen to meet major environmental challenges. And **(YOUR AQUARIUM/ZOO/MUSEUM)** is pleased to see that our nation has been joined by more than 190 countries around the world in adopting the goal of 30x30, so our national leadership and impact will not stop at our borders.

3. Conserving nature is essential for wildlife conservation, and so much more

- As a leader in animal care and conservation, (YOUR AQUARIUM/ZOO/MUSEUM) knows that conserving 30% of our nation’s lands, waters and ocean by 2030 is the minimum needed to protect our wildlife and cope with climate change **(SOME SCIENCE MUSEUMS MIGHT OPT HERE FOR PHASING THAT BETTER CAPTURES THEIR ESTABLISHED EXPERTISE, “As a leader in the natural sciences,...”)**
- **(YOUR AQUARIUM/ZOO/MUSEUM)** is committed to conserving nature, and we know if we don’t act quickly, the problem will only get worse. Many species such as the (INSERT RELEVANT LOCAL EXAMPLE) are facing an uncertain future. But if we act now, we can conserve those areas, help plants and animals, and help our communities too. **(PARTICIPANTS IN AZA SAFE MIGHT OPT HERE FOR PHRASING RELATED TO THAT INITIATIVE)**

4. Conserving nature can bring benefits to *all*

- Communities of color, low-income communities, and communities with high numbers of families with children are all more likely to live in areas that are lacking beneficial natural spaces.
- Creating parks and conserving open spaces helps wildlife and lessens the effects of climate change while providing clean air and clear water, as well as physical and mental health benefits to people – benefits that should be equally accessible to all Americans.
- Advancing 30x30 is an opportunity to work towards a more inclusive and equitable vision for nature conservation – one that better reflects our local and national values.

(When possible, include here what your visitors are saying as to why this matters to them!)

Quick Tip!

Zoos and aquariums can cite examples from their efforts with AZA SAFE when addressing 30x30 and America the Beautiful

5. We can do this! The goal is both ambitious *and* attainable

- Americans have a strong conservation ethic, and our nation has a history of coming together to create national parks, nature reserves, and marine protected areas. With approximately 12% of our lands and 23% of our ocean currently protected, getting to 30% by 2030 is an ambitious, yet also an attainable goal!
 - **(IMPORTANT NOTE RE OCEAN CONSERVATION)** There remains a vast potential for future protections to be spread out among representative habitats and bioregions within U.S. waters. The United States has one of the largest ocean territories in the world, located primarily in remote parts of the Pacific. Our ocean territory is greater than the area of our land, and currently only 3% of that area is fully protected, and another 20% highly protected.
- Here in **[YOUR COMMUNITY], (YOUR AQUARIUM/ZOO/MUSEUM)** is especially proud to be **[INSERT A LOCAL CONSERVATION PROJECT THAT'S IMPORTANT TO YOU OR YOUR ORGANIZATION]**, which will help us reach our national 30x30 goal.

6. This is a national movement that is locally driven

- 30x30 is a global movement with a national goal, yet it is centered on local efforts, and will rely on local input, from tribal councils to state leaders, from farmers and ranchers to fishers, from conservationists to recreationists, and all other Americans, young and old alike, who use and love our lands and waters.
- Native American, Alaska Native, and Native Hawaiian communities have been effective protectors of biodiversity since time immemorial. As stewards of many important and well-conserved lands and waters in the U.S., tribal nations are key to the success of the 30x30 effort.
- Farmers, anglers, ranchers, and private landowners are some of America's most important conservationists. Providing the tools, financial resources, and incentives for landowners and the private sector to restore degraded natural areas and manage their resources sustainably will be a must under 30x30.

7. Success to be built together, and shared by all

- Collaboration, a willingness to listen and understand different perspectives, and good-faith conversations between all Americans will be required to achieve 30x30 and solve our nature and climate crises.
- Only by working together can we achieve 30x30 and succeed in slowing the loss of nature and wildlife, lessening the impacts of climate change, and ensuring that everyone has access to the outdoors.

Quick Tip!

Encourage and enable audiences to add their own thoughts about conserving nature, perhaps by asking if they have a favorite animal or a favorite place that they would like to ensure is conserved, and explore ways to capture and share those comments!

(Additional notes specific to those focused on ocean conservation and/or climate change)

- Marine protected areas (MPAs) are proven tools that take the pressures off of our ocean and give it a chance to heal, and more than 95 percent of Americans support conserving more of our ocean.
- The nature crisis and the climate crisis are two sides of the same coin. Increasing protections for nature is critical to stabilizing the climate. And one of the most cost-effective strategies for mitigating climate change is to protect more land and water.

RESPONSES TO FALSE CLAIMS & HARD QUESTIONS

While the public response to the America the Beautiful Initiative and the 30x30 goal has been very positive, there is nonetheless the possibility that some people may have hard questions or make false claims. The information below is intended to help staff as they listen to concerns, answer questions, and offer corrections as needed. Most of the following are, again, courtesy of the American Nature Campaign.

FALSE CLAIM:
30x30 doesn't reflect the very real needs of communities and people across the country.

RECOMMENDED RESPONSE

Communities have a wide array of needs, and while this initiative certainly will not solve all of them, it will help conserve wildlife, protect the climate, and provide people with access to nature. The initiative is supported by 86% of voters, including strong bipartisan majorities, and is being driven by locally-led, locally-supported conservation efforts, driven by local stakeholders, including rural communities, Tribal Nations, private landowners, fishers, and many others on the frontlines of stewarding, using, and enjoying nature. By working together, we can safeguard our natural resources and the quality of life of people across the country.

RECOMMENDED RESPONSE

The 30x30 goal for the U.S. is an acknowledgment, grounded in science, that we need to accelerate the pace and scale of conservation to slow the loss of nature and ameliorate the worst impacts of climate change. It is a goal that is ambitious, but also reasonably attainable within the decade. There is broad agreement among scientists that we haven't conserved nearly enough of our lands, waters, and ocean to slow the loss of nature, safeguard biodiversity, and maintain healthy wildlife populations. A growing consensus of scientists suggests that we'll need to protect at least 30% of the planet's lands, waters, and ocean to meet the scale of challenges facing nature. 30x30 is the right goal at the right time. It's grounded in science, and it's achievable.

FALSE CLAIM:
30% is an arbitrary target set for political purposes, not science.

FALSE CLAIM:
30x30 places egregious mandates on private landowners. It is a "land grab."

RECOMMENDED RESPONSE

Private land conservation has always been voluntary. Anyone claiming otherwise, or that 30x30 is an attempt to impede private property rights, is not yet informed about the goals and priorities of the 30x30 movement and the America the Beautiful initiative. Farmers, anglers, ranchers, and private landowners are some of America's most effective conservationists. The national 30x30 initiative recognizes those who steward, use, and enjoy nature can work together to aid voluntary private conservation efforts, which have long been a bulwark against the decline of nature. 30x30 is an opportunity to support private landowners committed to protecting their property by providing financial resources and incentives for landowners and the private sector to restore degraded natural areas and manage their resources sustainably.

RECOMMENDED RESPONSE

30x30 under America the Beautiful initiative recognizes that nature is the backbone of rural communities and we need to be supporting efforts to safeguard lands, waters, and wildlife. By relying on local experts who use and love our public lands—from ranchers and fishers to conservationists, recreationists, hunters, and anglers—30x30 can meet the scale of the challenges facing nature while preserving these traditional and sustainable activities. Together, we can safeguard the jobs, livelihoods, cultures, and recreation access our communities rely on for future generations.

FALSE CLAIM:
30x30 is an effort to lock-up multiple use lands and limit traditional uses.

RESPONSES TO FALSE CLAIMS & HARD QUESTIONS CONTINUED...

Quick Tip!

Referring to 'lands, waters and ocean' can help visitors understand that ocean areas are included too!

FALSE CLAIM:
A national goal to conserve 30% of lands and ocean by 2030 is not compatible with our energy needs as a nation.

RECOMMENDED RESPONSE

While the United States transitions to a clean energy economy, our national public lands will undoubtedly continue to play a central role in energy production. But we don't have to choose between meeting our nation's energy needs and safeguarding natural areas. Through a collaborative planning process to meet our future energy needs, land managers and community stakeholders must work together to determine which lands are most appropriate for energy development and which lands are still in natural condition and should be managed to preserve biodiversity. With the help of smart and collaborative planning, we can reduce the land-use footprint needed for energy sources and work together to meet a 30x30 goal.

RECOMMENDED RESPONSE

The administration's commitments to reach net-zero carbon emissions by 2050 and protect 30% of our lands and ocean by 2030 are visionary goals that can work in concert to ameliorate the impacts of climate change and save nature as we know it. To meet these ambitious standards, land managers and community stakeholders will need to work together to determine which lands are most appropriate for renewable energy development, which lands are still in natural condition and should be managed to preserve biodiversity, and where renewable energy and conservation might even be compatible. It will require thoughtful and collaborative solutions, yet those are well within the realm of possibility if we work together.

FALSE CLAIM:
The Biden administration's renewable energy goals are in conflict with its biodiversity goals. How can the administration achieve net zero carbon emissions by 2050—which scientists say may require solar panels and wind turbines on more than 225,000 square miles of land—while conserving 30% of lands by 2030?

FALSE CLAIM:
30x30 is part of a politically partisan agenda

RECOMMENDED RESPONSE

While the goal was adopted by the current administration, support has been broad and nonpartisan. In polling, four out of five voters nationwide express support for the goal of 30x30 (Including 68% of Independents, 72% of Republicans, and 90% of Democrats). This public support was recently echoed by elected officials from communities across the country, with more than 70 mayors and 450 state and local officials - Democrats, Republicans, and Independents alike - signing letters to applaud the adoption of the goal and the vision for achieving it, with the emphasis on a collaborative and locally driven process under the "America the Beautiful" initiative. A similar letter also was signed by more than 200 zoos, aquariums, and museums, as well as AZA, AAM, and ASTC!

FALSE CLAIM:
A national goal to conserve 30% of the ocean by 2030 would undermine America's commercial fishermen, who already work hard to manage fisheries sustainably.

RECOMMENDED RESPONSE

U.S. fisheries are indeed among the best-managed in the world. In the last 15 years, we have made significant progress in reducing overfishing and rebuilding depleted fish populations and we have maintained the amount of fish caught by America's fishers, all while expanding strongly protected areas from less than 1% to 23% of America's ocean. Thriving fisheries and marine protected areas can co-exist—and already do. We need strong fisheries management as well as strong marine protected areas. Marine protected areas can serve as a savings account to protect vulnerable places and help rebuild fish populations—a result that benefits fishing, coastal communities, and ocean animals alike. The effort to ensure 30% of America's ocean is conserved by 2030 should be driven by local stakeholders, including fishing.

SUGGESTED SOCIAL MEDIA POSTS

In addition to sharing organizational support for the 30x30 goal and the “America the Beautiful” Initiative across social media platforms, consider opportunistically incorporating the importance of conserving more nature into your posts about a local collaboration, news event, special day or even the birth of a new animal. Include, when possible #30x30 or #Protect30x30 for the goal, as well as #SaveMoreNature or #AmericaTheBeautiful, and pair with a relevant photograph or graphic. Additional and more time-sensitive suggestions related to the national effort will be provided throughout the campaign, and be sure to check for local initiatives in your community too!

Opportunity: an event related to a local conservation collaboration

- All across #AmericaTheBeautiful, communities are working on locally-led solutions to help conserve our lands, water and ocean and reach the goal of #30x30. And we're proud to be part of [INSERT A LOCAL CONSERVATION PROJECT THAT'S IMPORTANT TO YOUR ZOO/AQUARIUM/MUSEUM], here in [YOUR COMMUNITY]. Together with you we are #SavingSpecies and can #SaveMoreNature!
- Congratulations to [YOUR COMMUNITY] on the (ACTION BENEFITTING LOCAL CONSERVATION EFFORTS)! Locally-led efforts like this are essential to conserving and restoring #AmericaTheBeautiful, and reaching our national goal of conserving 30% of our lands, water and ocean by 2030. #30x30.

Opportunity: an event associated with your animal conservation efforts, such as the birth of a new animal, a milestone in a local conservation effort, or even the celebration of a special day

- Announcing the birth of a new [INSERT RELEVANT SPECIES] at (YOUR ZOO/AQUARIUM/MUSEUM)! We are committed to #SavingSpecies like (INSERT RELEVANT SPECIES) and to the goal to #SaveMoreNature all across #AmericaTheBeautiful #30x30
- The conservation efforts of (YOUR ZOO/AQUARIUM/MUSEUM) and other @zoos_aquariums across #AmericaTheBeautiful got a big boost with [INSERT RELEVANT EVENT), showing that through local, inclusive and collaborative efforts we can meet the national goal of conserving 30% of the lands, waters and ocean of #AmericaTheBeautiful by 2030 #30x30
- #WorldSeaTurtleDay is a reminder of the need for #SavingSpecies, and the importance of conserving at least 30% of our ocean by 2030 in keeping with the goal of #30x30, nationally and globally!

Opportunity: showcase and share posts by your visitors, special guests and/or community members about their interests and involvement!

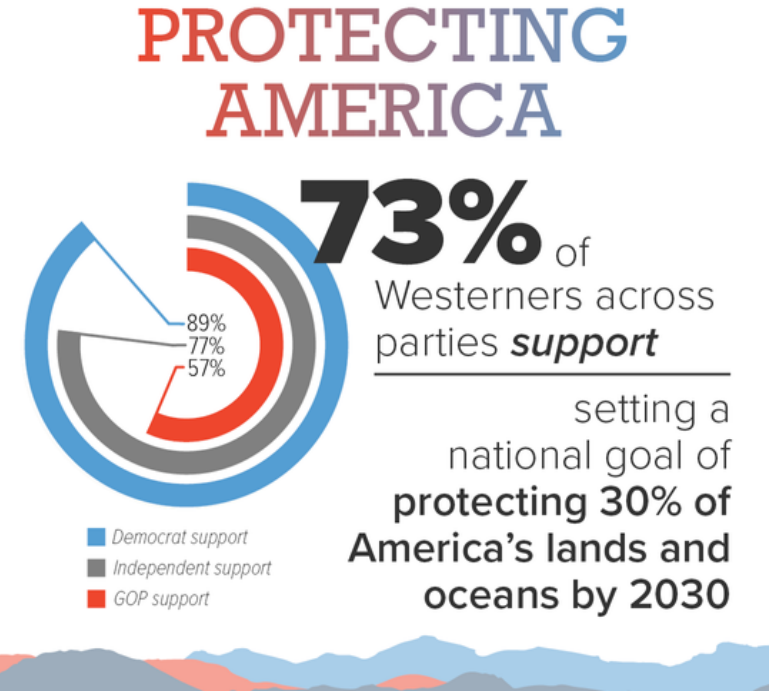

- Thank you for letting us know why #SavingSpecies and efforts to #SaveMoreNature all across #AmericaTheBeautiful matter to you!

Quick Tip!

Adapt these ideas to match with what you know works best on your various platforms

EXAMPLE VISUALS

Photos and videos help draw attention, and graphics can be used to convey key points

Consider complimenting your post with photos, graphics or short videos and using images that show not only the animals but also visitors or the public interacting with staff or observing animals, as inclusion is an essential element in this initiative. You may also wish to link to an action page, such as the one shown here, as a way to enable your audiences to share their opinions directly with their representatives. Examples shown here are “evergreen,” and many more, including a short video to help introduce audiences to 30x30, which can be found [here](#).

Additional ideas and imagery will be provided around specific events and opportunities.

BANNER, POSTER, AND POSTCARD TEMPLATES

These designs and others were created specifically to help zoos, aquariums and museums raise public awareness and gather public feedback. Please note that there are print ready PDFs, as well as design files into which organizations can easily insert their own photos and logos. Alternative wording is also available for those who want to highlight what is happening in the context of the global movement for 30x30 or in connection with AZA SAFE, while remaining consistent with the overall messaging.

Go to theoceanproject.org/30x30 to download these files and more.

Quick Tip!

These designs also can be adapted for use on social media!

Please support the **America the Beautiful initiative**, and the local efforts needed to **conserve at least 30% of U.S. lands, waters, and ocean by 2030**.

By conserving and restoring more natural areas, we can help protect our wildlife, stabilize our climate, and safeguard our future, while providing our communities with improved access to the outdoors.

I hope you will join with me, alongside zoos, aquariums and museums from across our country, in support of this important initiative!

SAMPLE SCRIPT

For a small group engagement with comment cards, as adapted from a script developed by the New England Aquarium and The Ocean Project. Notably, this script can be further modified to draw attention to a specific proposal for a new, expanded, or improved protected area!

(WELCOME)

(THIS EXHIBIT) represents a thriving (ECOSYSTEM TYPE) and is home to many amazing animals!

You might be familiar with (SPECIFIC ANIMAL – E.g. “...our largest resident Myrtle the green sea turtle.”) Today I would like to share how together we can help protect ecosystems like (ECOSYSTEM TYPE) and animals like (SPECIFIC ANIMAL). My friends _____ and _____ are coming around with some postcards that look like this.

This card will be your tool for joining (YOUR ORGANIZATION) and your fellow community members in support of our ocean! (OR IF NOT USING POSTCARDS, REFERENCE OTHER COLLECTION METHOD HERE: E.G. In a few minutes, I'll be asking you to take out your phones, as that will be your tool for joining (YOUR ORGANIZATION) and your fellow community members in support of our ocean!)

(PIVOT TO OPPORTUNITY FOR ACTION)

One way people are successfully protecting wild places on land for the benefit of animals and people alike is with national parks! Who here has heard of a national park? Okay great! Now who here has heard of a marine protected area? Just like national parks provide protection for land animals, marine protected areas provide a sanctuary for ocean animals like (SPECIFIC ANIMAL) by creating a safe place away from harmful activities. People haven't always been good to the ocean and its animals, but by conserving important areas we now have a way to help. Thanks in part to support from people like you, (RELEVANT MPA – E.g. “...the newly created Northeast Canyons and Seamounts Marine National Monument”) is now allowing threatened populations of (RELEVANT SPECIES), as well as other animals time to recover.

The creation of (RELEVANT MPA) was important, but not enough. Currently only a very small portion of the ocean is part of a marine protected area. Scientists tell us we need to conserve at least 30% of our lands, waters and ocean by the year 2030, if we want to continue to receive all of the benefits that nature provides, from clean air and drinking water to food and natural resources. This goal is known as “30 by 30.” The good news is that as a nation we recently joined with countries around the world in adopting this goal of 30 by 30, with a compelling vision for collaborating to conserve and restore America the Beautiful, and by showing our support today, and working together going forward, I am confident we can achieve it!

(MAKE THE ASK)

If you agree that it's important to protect 30% of our land, waters and ocean by 2030, please (SIGN THE POSTCARD / TAKE ACTION) before leaving here today. [Hold up card.] If you did not already receive a card, you can see _____ across from me who can also take your completed cards. We will then deliver these cards to share your support with our national leaders. (OR IF NOT USING POSTCARDS, REFERENCE OTHER COLLECTION METHOD HERE E.g. New Modeplease take out your phones, and go to _____. HOLD UP PHONE. CONTINUE TO EXPLAIN PROCESS, AND HOW THEIR SUPPORT WILL REACH DECISION MAKERS)

(CONCLUSION)

Working together we can help protect these special places, maintain healthy ocean ecosystems and ensure that the wonders of our ocean remain for generations to come. So on behalf of the (SPECIFIC ANIMAL) and (ECOSYSTEM TYPE), thank you!

QUICKLY CONNECTING

For quickly engaging with visitors while they are seeing and learning about the animals, the following example is adapted from a successful experience at the Philadelphia Zoo, where they provided visitors with postcards for signature. Asking visitors to sign posters or record their support, also has proven to be a crowd-pleaser!

OPTIONS FOR ADULTS AND FAMILIES

Would you be interested in signing a postcard that we will send to your representatives to support conserving our lands, waters, and the ocean? All we ask is for you to provide a little bit of information about yourself, and we'll take care of the rest!

Thanks for visiting today! If you want to help us save wildlife, we'd love to have your support for 30x30. These postcards are being sent to your representatives to let them know that their constituents support conserving 30% of our lands, waters, and ocean by the year 2030. You can help by signing one of the postcards today. We'll deliver it to the right people.

OPTIONS FOR CHILDREN AND TEENS

Hi! Did you love seeing **(SPECIFIC ANIMAL)** today? Would you like to help protect them? Come on over and I'll show you how!

Thanks for visiting today, I hope you liked learning about **(SPECIFIC ANIMAL)**. There is a way for you to help these and other animals right now through this cool initiative called 30x30? It's a global effort to protect 30% of the planet's lands, waters, and ocean by the year 2030. The United States recently joined this effort, and we need to make sure our representatives know that this is important to us. If you sign this postcard, we'll send it along on your behalf.

TIPS

Make it your own! No one knows your audience better than you and your staff. Test out several options, and let your staff choose the wording that works best for them, and your specific location.

Keep it simple! When you only have a few seconds, every word counts. Let them know up front what you are asking them to do.

Continue the conversation! While guests are taking action, continue to speak with them about the initiative and ask them about their interests.

30% BY 2030

#Protect30x30

GET INVOLVED!
